RUBBER BLANKETS

GLAZE ELIMINATION

CALCIUM ELIMINATION

SAFE TO USE

REJUVENATES

FAST COLOUR CHANGES

ONE STEP PRODUCT

00503 ROLLER MILK

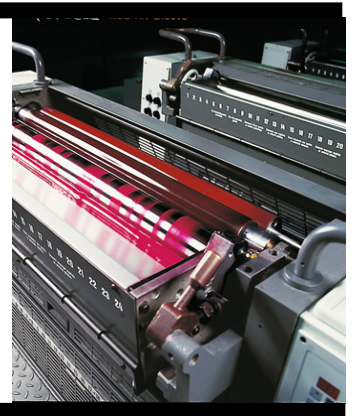

ONE STEP RUBBER CONDITIONER

Application

Roller Milk is a super concentrated one step solution, used for deep cleaning inking rollers. When used regularly removes deep ground in ink, gum glaze, Calcium and surfactant deposits in the inking rollers or blankets.

These contaminants cause glaze, uneven ink transfer and premature roller hardening.

Eliminates the need for harsh solvent deglazers or pastes. Regular use will maintain rubber condition.

Instructions

Apply to clean rollers across the top of the roller train and allow to work in for at least 5 minutes, if necessary adding more.

Apply wash blade to remove residue and rinse with liberal amounts of water and allow to dry. Should be used for quick

colour changes or when changing from dark to light ink or varnish, thus avoiding having to wash a second or third time.

For larger presses use as a first step and water as a second step.

Repeat regularly for effective roller maintenance.
